

Team Data Sharing Agreement: Project "DeepHealth"

Team Name/Table #: _____

1. The Governance of "Who" (Ownership & Custodianship)

- **The Primary Custodian:** Which partner is legally responsible for the storage and security of the *merged* dataset?
- **The Intellectual Property (IP) Split:** If the Tech Partner's AI improves using the University's genomic data and the Clinic's patient history, who owns the "improved model"? (e.g., Joint ownership, Tech Partner owns but University has free license, etc.)

2. The FAIR+ Execution (The Technicals)

- **Interoperability Standard:** To avoid the "PDF vs. Genomic" bottleneck, what will be the common "neutral" file format for shared analysis?
- **The Metadata Tax:** Who is responsible for the labor-intensive task of tagging and cleaning the data so it is **Findable**? How is this labor compensated/credited?

3. The "Red Lines" (Security & Privacy)

- **Veto Power:** Does the Community Clinic have the right to veto a public data release if they feel it risks "re-identification"?
 - ☐ Yes (Full Veto) ☐ Yes (Conditional Veto) ☐ No (Pre-agreed de-identification is sufficient)
- **Access Tiers:** Define who can see the raw, sensitive SDOH notes vs. the de-identified genomic markers.

4. The Publication & Sharing Timeline

- **The "Embargo" Period:** How many months does the University have to publish their primary findings before the data *must* be made **Accessible** to the public per grant requirements?
- **The "Commercial Head-start":** How much time does the Tech Partner get to "vet" publications for trade secrets?

5. Exit Strategy

- If a partner leaves the project early:
 - Do they take "their" data with them?
 - Do the remaining partners lose the right to use the data already contributed?
