BRIDGE2AI

The Implementation Challenge

Concept	The Trap	The Strategy
 The Knowing-Doing Gap	 Assuming that learning Team Science principles automatically leads to behavior change in complex, siloed projects.	 Design for unfavorable conditions, the 'Hot State': Create checklists and defaults that work when you are stressed and busy.
 Resistance	 Viewing skepticism as "being difficult" or "anti-collaboration".	 The Pilot Method: Lower the stakes. Don't ask for a permanent change; ask for a temporary experiment.

Activity 6: The Monday Morning Protocol

The Design Sprint (Start Small & Measurement)

Step 1: Select the Variable

Participants pick **one friction point** from Modules 1-5 (e.g., “Meetings go overtime,” “Data is hard to find,” “Unclear authorship”).

Activity 6 (Part II): The Monday Morning Protocol

BRIDGE2AI

The Reality Check (Scaling Thoughtfully)

Pair up

Pick a color – orange or green

Activity 6 (Part II): The Monday Morning Protocol

The Reality Check (Scaling Thoughtfully)

Peer Consulting: The Skeptic's Role

Pairs swap plans. The partner plays the role of the **Skeptic/System** (e.g., a busy PI or cynical post-doc). They identify **one reason the pilot will fail**.

Let's share a few micro-pilots

Sustainability isn't about giant leaps; it's about successful pilots that get scaled because they *work*.
