BRIDGE2AI

SCIENCE AT SCALE: THE INFRASTRUCTURE OF DISCOVERY

WELCOME!

Mónica Muñoz Torres, PhD.

Department of Biomedical Informatics,
University of Colorado Anschutz.
February 13, 2026

University of Colorado Anschutz

OUR PURPOSE

Modern science demands **scale** and **multidisciplinary collaboration**.

We'll go beyond *getting along* and equip you with tools for thriving in complex scientific landscapes.

FACILITATORS

Christine Velez, Grace Gonzalez, *University of Colorado Denver*

Jamie Toghranegar, *University of South Florida*

Jake Chen, *University of Alabama Birmingham*

Yulia Levites Strekalova, *University of Florida*

Colleen Cuddy, *Stanford University*

Janani Ravi, *University of Colorado Anschutz*

Pamela Foster, *University of Alabama Birmingham*

Sara Singer, *Stanford University*

Sean Davis, *University of Colorado Anschutz*

Mónica Muñoz Torres, *University of Colorado Anschutz*

Bridge2AI

The Bridge to Artificial Intelligence.

A groundbreaking initiative aiming to generate AI-Ready data through large-scale coordination.

A massive experiment that transcends traditional "hero science" models, **requiring new infrastructure and teamwork** to solve complex problems in biomedical informatics.

BRIDGE2AI

Community Agreements

Environment

- ***Las Vegas Rule:*** Stories stay, Lessons leave to protect privacy.
- ***No judgments*** to foster open and honest communication.
- ***Calling in vs. calling out,*** emphasizing kindness and compassion.
- ***Safe space, brave space*** for sharing all views.
- ***Dialogs, not debates,*** to build understanding.

Individuals

- ***Move around*** to stay engaged and connected.
 - ***Avoid multitasking*** to maintain focus and presence.
 - ***Use e-devices thoughtfully,*** prioritizing group engagement.
 - ***Stay present*** to maximize learning and collaboration.
 - ***Facilitators*** guide the process, not instruct.
- 

Exemption

- Data collected during this workshop may be analyzed later to improve collaboration methods.
- Workshop activities have been reviewed and are exempt from IRB oversight.
- Your privacy and confidentiality are maintained throughout the workshop.
- Ethical standards are upheld while enabling innovative team science approaches.

*What is one friction point in
your current collaborations
that you hope to solve today?*

E.g., miscommunication, unclear roles, slow data sharing, etc.

BRIDGE2AI

Spectrum of Collaboration

Micro: Close-Knit

- Typically 2–3 colleagues; same department or discipline.
- Communication costs are low; shared language is high.
- Quick chats, hallway conversations, and direct exchanges.
- Usually clear roles and expectations.
- **Example:** A small research team co-authoring a paper within one lab.

Macro: Distributed

- Hundreds of researchers across multiple institutions and time zones.
- Expertise varies across disciplines and there are distinct vocabularies (e.g., clinicians vs. coders).
- Communication requires formal structures and standardized processes to manage complexity.
- Informal habits from Micro settings (e.g., hallway chats) can cause breakdowns.
- **Example:** Bridge2AI consortium.

Innovation Requires Infrastructure

Goal: Innovation & Impact

Aiming to achieve significance.

Requirement: All Expertise Included

Multidisciplinary expertise including genomics, ethics, computer science, and statistics.

Mechanism: Teaming

Effective teams enable access to all expertise; facilitates communication, coordination, and shared problem-solving.

Conclusion: Teams for Success

Teams are essential infrastructure that supports innovation, discovery, and scientific breakthrough.

The Research Life Cycle

Team Science powers every stage of the research.

Takeaway

- Today's **Modules** correspond to stages around the Research Life Cycle wheel.
- Team Science fuels collaboration at each stage: ideation, planning, data generation, analysis, and dissemination.
- Successful team collaboration acts as **the grease** that keeps the research wheel turning smoothly.
- **If the team breaks, the cycle stops.**
